A Data Coin Eco System and Platform to Empower Markets for Selling and Buying Datasets

The Datagold Team

.

 Our vision: We have just entered the era of **Big Data**, in which datasets become increasingly valuable, sometimes as valuable as gold. Thus, there is an increasing need for the selling and buying of valuable datasets. Meanwhile, recent advancements in **NFTs (Non-Fungible Tokens)** and blockchain technologies make it possible to trade datasets over the Internet without a third trusted party. Trading transactions are automatically recorded on the blockchains and these records are immutable, permanent, and irrefutable. In light of this need, two data coins (DAT, DGC) were born. Our vision is that these data two coins can greatly facilitate the exchange of datasets, fungible and non-fungible tokens, contributing to a multi-billion dataset exchange market. While DAT will facilitate small transactions, DGC will facilitate large transactions.

Contract address: DAT is a token created on the most popular Ethereum platform and thus can easily be exchanged with all other tokens created on Ethereum. The contract of DAT is here: Data | 0x9ab0ce7871d02fec32beeb1a60fb1abf418e0b40 (etherscan.io)

DAT Tokenomics: Total supply: 1,000,000,000 DAT, Max supply: 1,000,000,000 DAT, Circulating supply: 1,000,000,000 DAT, so no inflation at all.

DGC Tokenomics: Total supply: 10,000,000 DGC, Max Supply: 10,000,000 DGC, circulating supply: 10,000,000 DGC, so no inflation at all.
